SKILLS

Programming: HTML,CSS, JavaScript,Python, SQL, JavaScript
Web: HTML, CSS, React, REST APIs
Systems / DevOps: Linux, Docker, Nginx, Git, GitHub
IoT / Embedded: Raspberry Pi, ESP32, ESP8266, MQTT, Modbus, RS-485
Automation / AI: n8n, OpenAI API, Gemini, Claude, Ollama, Codex, Cursor, Lovable,Manus, Antigravity
Databases / Testing: MySQL, MongoDB, Redis, Supabase, pytest
Tools: Trello, NotebookLM

EDUCATION

King Mongkut's Institute of Technology Ladkrabang (KMITL)
Bachelor of Science in Industrial Education Program in Engineering Education
Bachelor of Science in Industrial Education (Engineering Education) (Computer branch) Graduated: 2025

PROFESSIONAL EXPERIENCE

Sahaviriya Steel Industries Public Company Limited **Silom, Bangkok, TH** **April 2024 – June 2024**
IT & Digital Technology Intern

- Supported digital technology and internal IT operations.
- Developed and improved workflow solutions using Microsoft Power Apps and Power Automate.
- Worked with SharePoint, Microsoft Teams, and organizational data.
- Assisted with system testing, troubleshooting, and technical documentation.
- Collaborated with users to understand requirements and improve work processes.

Kanchanaphisek Technical College Mahanakorn **Min Buri, Bangkok, TH** **November 2025 – September 2026**
Computer Technology Teaching Intern

- Delivered lessons on Digital Technology for Careers, Linux Operating Systems, and Mobile Application Development.
- Created instructional materials, practical exercises, assessments, and interactive learning activities.
- Guided students through hands-on laboratory sessions involving Linux and mobile application development.
- Managed online learning materials and student activities using Moodle and digital productivity tools.

PROJECTS

Portfolio website: anchisaphetnoi.github.io (for additional information and projects)
Network-Enabled Temperature Monitoring System: https://github.com/AnchisaPhetnoi/Temperature_Monitoring_Syste

- Network-based monitoring system integrating temperature-sensing hardware, data communication, and a monitoring dashboard.
- Designed and developed an undergraduate project for remotely monitoring temperature data through a network.
- Integrated temperature-sensing equipment with network communication and a dashboard for viewing system data.
- Documented the development and testing process through hardware images, dashboard screenshots, project reports, and technical summaries.
- Used Git and GitHub to organize project materials, results, and supporting documentation.

ESP32 Embedded Systems Projects: FreeRTOS Task Project , Wi-Fi Access Point , Button Counter Cookbook

Hands-on ESP32 projects covering task management, GPIO control, hardware interaction, and wireless networking.

- Developed task-based embedded applications using ESP-IDF, FreeRTOS, C, and CMake.
- Configured an ESP32 as a Wi-Fi access point, including authentication, DHCP connectivity, and station-event monitoring.
- Implemented GPIO-based LED control and push-button press counting for hardware testing.
- Documented project setup, source-code structure, build steps, hardware results, and demonstrations on GitHub.

Mathematics Learning Website:(https://anchisaphetnoi.github.io/Make-a-website/) (https://growspace.onrender.com/) (github.com/AnchisaPhetnoi/Make-a-website) (https://github.com/AnchisaPhetnoi/growspace)
Multi-page educational website providing Thai-language mathematics learning materials.

- Developed learning pages covering probability, real numbers and polynomials, complex numbers, logic, statistics, and financial mathematics.
- Organized HTML, CSS, JavaScript, and image assets into a structured multi-page website.
- Designed the website to support self-paced access to mathematics content.
- Published the project online through GitHub Pages.
